Project Submission Requirements

This document outlines the final criteria, validation, and deadlines required for the successful completion and submission of the **B1AI DEVOP1** project.

1. Quality Standards & Functional Completion

- **Expectations:** All project tasks, sprints, and activities outlined in the project plan must be fully implemented, validated, and meet the expected quality standards.
- **Requirements:** Ensure all components (Backend, Airflow pipelines, Zabbix telemetry, database structures, and Kubernetes configs) are active, stable, and behave according to the specifications.

2. Communication & Alignment

- **Expectations:** Maintain regular communication with your supervisor throughout all phases of the project.
- **Requirements:** Ensure alignment on all architecture revisions, credential sanitization steps, and deployment procedures to guarantee a correct and effective implementation.

3. Pre-Submission Testing & Environment Validation

- **Expectations:** Prior to the final submission, conduct exhaustive manual and automated testing of all deliverables.
- **Requirements:**
 - Identify and resolve any remaining bugs or security issues.
 - Prepare and validate the deployment environment (WSL `B1AI_DEVOP1`` instance, Docker Compose services, and Kubernetes local cluster) to ensure it can support direct deployment by external reviewers.

4. Final Submission Deadline

- **Expectations:** You must submit a complete, verified, and easily accessible project repository.
- **Requirements:** The repository must include:
 - Complete source code for backend APIs, DAGs, and dashboard configurations.
 - Configuration profiles (`.env.sample``, `docker-compose.yml``, Kubernetes manifests).

- System manuals and compiled PDF documentations.
- ****Hard Deadline:**** No later than ****June 24, 2026**** to allow the teacher to review and evaluate your work effectively.
