Agile User Stories

The following user stories define the development roadmap for Project Antigravity:

- **TG-101**: As a DevOps Engineer, I want to deploy the MySQL schema automatically on startup so that I have a clean DB state.
- **TG-105**: As an your_admin_user_hereistrator, I want to configure port offsets so that I avoid conflicts with local databases.
- **TG-106**: As an Auditor, I want to compile the documentation to PDF so that I can verify the requirements.
