System Topology 3

Domain Project Definition: DEVOP1

The project domain encompasses automated telemetry collection and validation of XAU (Gold) commodity price indices.

System Topology

- **MySQL Database**: Stores pre-loaded gold rates and schema definitions.
- **Airflow**: Schedules the periodic execution of scrapers and loader jobs.
- **Flask App**: Serves system status, versioning, and logs.
- **Zabbix**: Connects over raw TCP to receive alerts when scrapers fail.
