Presentation & Documentation Rubric 6

Project Submission Requirements

Parameter	Details
Institution	Brevet de Technicien Supérieur
Module	DEVOP1 - Project Submission Requirements
Date	24.06.2026
Delivery	24.06.2026
Presentation	01.07.2026
Room	SC-27
Candidates	Roni Fernandes Dias / François LANGE

Part 1 Quality Standards & Functional Completion

Task 1: Systems Functional Validation

Ensure that all project tasks and activities outlined in the project plan are fully completed and meet the expected quality standards and functional requirements.

Expected Deliverables:

- A fully functional multi-service containerized stack (MySQL database, Flask API backend, Zabbix Server monitoring, and Apache Airflow scheduler).
- Functional verification logs proving successful data flows.

Part 2 Communication & Alignment

Task 1: Supervisor Checkpoints

Maintain regular communication with your supervisor throughout all phases of the project to ensure alignment and effective implementation of each component.

Expected Deliverables:

- Detailed sprint backlogs, wireframes, and architecture specs reviewed and aligned.
- Completely sanitized git histories with all sensitive credentials and keys removed.

Part 3 Pre-Submission Testing & Environment Validation

Task 1: Infrastructure and Deployment Readiness

Before submission, conduct thorough testing of all deliverables to identify and resolve any bugs or issues. Prepare and validate the necessary infrastructure, environments, and configurations required to support deployment.

Expected Deliverables:

- Verified host-level, container-level, and local Kubernetes deployment configurations.
- An exported and validated WSL distro backup (`.tar` file) ready for external execution.

Part 4 Final Submission Deadline

Task 1: Repository Delivery

You must submit a complete and accessible project repository including the test environment, source code, configuration files, and documentation no later than June 24, 2026, to allow the teacher to review and evaluate your work effectively.

Expected Deliverables:

- Clean git repository containing code, `.env.sample` profiles, and kubernetes/docker-compose configurations.
- All compiled system documentation PDFs and Word documents.

Part 5 Evaluation Criteria

Technical Implementation Rubric

Criteria	Points
1. Agile Project Management Setup (Trello, Jira, etc.)	4
2. Git Usage and Workflow (branches, commits, CI links)	6
3. Dockerization of All Components (Dockerfiles, Compose)	6
4. Jenkins CI/CD Pipelines (pull, test, build, deploy)	2
5. Kubernetes Integration (pods, services, manifests)	2
Total	**20**

Individual Workload Rubric

Criteria	Points
1. Clear ownership of at least one project module	5
2. Git contribution (commits, merges, documented code)	5
3. Quality and completeness of the assigned task	5
4. Teamwork and collaboration (responsiveness, support)	5
Total	**20**

Presentation & Documentation Rubric

Criteria	Points
1. Presentation of project flow, architecture, and outcomes	5
2. Live demo or screenshots of working services (Zabbix, app, DB, etc.)	5
3. Technical documentation (README, config files, usage guide)	5
4. Clarity, structure, and engagement during oral presentation	5
Total	**20**
