Backup Procedure Guide

Follow this procedure to create manual or automated backups of the databases and configurations.

1. Database Backup

To perform a complete database dump of all schemas (Flask, Airflow, Zabbix):

```
docker exec devop1-mysql mysqldump -u root -pyour_db_password_here --all-databases | gzip > database/backups/db_bac
```

2. Configuration Backups

Zip the `.env` and configuration files:

```
tar -czvf configs_backup.tar.gz .env docker-compose.yml XAU/*.py
```
